MOHAN BABU UNIVERSITY

Sample Academic Assignment

Subject: CRDT

Student Name: _____
Student ID: _____
Submission Date: _____

Objective

Apply data handling and computational research tools to organize and analyze a dataset.

Tasks

1. Create or obtain a dataset with at least 30 records and 5 columns.

2. Import the dataset into Python and document the data dictionary.

3. Use filtering, sorting, grouping, and aggregation to answer five questions about the data.

4. Export the cleaned dataset to CSV.

5. Create a summary table and one meaningful chart.

6. Write a short reproducibility note listing software, libraries, and steps used.

Submission

Submit the source dataset, cleaned CSV, notebook/script, and a short report.

Note: This is a sample practice assignment created for website testing and learning. It is not an official university-issued assignment.
