MOHAN BABU UNIVERSITY

Sample Academic Assignment

Subject: Data Science

Student Name: _____
Student ID: _____
Submission Date: _____

Objective

Practice loading, cleaning, exploring, and visualizing a small dataset using Python.

Dataset

Use a CSV dataset of your choice (for example, student marks, sales, or weather data). Mention the dataset source in your submission.

Tasks

1. Load the CSV file using Pandas and display the first 10 rows.

2. Inspect the dataset shape, column names, data types, and missing values.

3. Clean the dataset: handle missing values and remove duplicate rows where appropriate. Explain your choices.

4. Calculate at least five descriptive statistics for numerical columns.

5. Create three visualizations using Matplotlib or Seaborn: a bar chart, a histogram, and a scatter plot.

6. Write 5–7 observations based on your analysis.

Submission

Submit your notebook (.ipynb) and a short PDF report containing the dataset description, cleaning steps, plots, and observations.

Note: This is a sample practice assignment created for website testing and learning. It is not an official university-issued assignment.
