MOHAN BABU UNIVERSITY

DATA SCIENCE LAB — SAMPLE EXPERIMENT

Experiment: SQL

Student Name: _____

Student ID: _____

Date: _____

Aim

To practice creating tables and performing basic SQL operations.

Requirements

MySQL 8.0 or another SQL database.

Experiment

1. Create a database named college_lab.
2. Create a Students table with student_id, name, department, and marks columns.
3. Insert at least five student records.
4. Select all records and select only students from one department.
5. Update the marks of one student and delete one sample record.
6. Use ORDER BY to sort students by marks.
7. Use GROUP BY with an aggregate such as AVG(marks) to calculate department-wise average marks.

Expected Output

SQL statements and result tables for each operation

Conclusion

Explain how SELECT, INSERT, UPDATE, DELETE, ORDER BY, and GROUP BY were used

Note: This is a sample practice lab experiment created for learning and website testing. It is not an official university-issued lab manual.
