Reference Books: Data Science

Sample reading list | Verify editions and library availability

Recommended references

- Python for Data Analysis — Wes McKinney.
- An Introduction to Statistical Learning — Gareth James, Daniela Witten, Trevor Hastie, Robert Tibshirani, and others.
- Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow — Aurélien Géron.

How to use a reference book

- Read the chapter related to your current lab topic.
- Work through examples using your own small dataset.
- Record page numbers and concepts for revision.
- Use legally available library copies or publisher resources.

Academic integrity

Do not upload copyrighted full books unless you have permission. Use your institution's library links or authorized materials.

Sample educational material for the MBU DS LAB Resources page. Verify course-specific requirements with your faculty.
